In Association with

Ponnani Municipality

Academic Year: 2025–2026

Department of Data Science and Analytics

MES PONNANI COLLEGE, PONNANI

ACKNOWLEDGEMENT

The **Department of Data Science,** MES Ponnani College, acknowledges the support extended by Ponnani Municipality in facilitating the community survey conducted as part of this study on women's education, employment, and social challenges in Ponnani.

We express our sincere gratitude to the **Principal of MES Ponnani College, Dr. Sabique**, for his encouragement and support in promoting academic initiatives that connect classroom learning with community engagement.

We extend our appreciation to **smt. Shirin Shahnas B. V., Head of the Department of Data Science**, for her guidance, coordination, and support throughout the planning and execution of the survey.

We also acknowledge the valuable contributions of the faculty members of the Department of Data Science**, smt. Suhaila T.** and **smt.Thasleena**, for their assistance and encouragement during the conduct of the survey activity.

Special thanks are extended to the students of the Department of Data Science who actively participated in the design of the questionnaire, field data collection, data entry, and compilation of the findings.

Finally, we thank all the women participants from Ponnani who voluntarily shared their time and perspectives, which made this study possible**.**

1. EXECUTIVE SUMMARY

This study examines the factors influencing women's empowerment in Ponnani through a survey conducted among women respondents. **The main purpose of the survey was to understand women's educational background, employment status, challenges preventing them from working, and their awareness of government programs designed to support education and employment and how marriage affected their life choices**. The study also aims to identify practical measures that can be taken by local authorities and educational institutions to improve women's participation in education, skill development, and economic activities.

The analysis of the responses indicates that most respondents have completed **secondary or higher secondary education**, while only a small percentage have pursued higher education such as degree programs. This suggests that **although basic education levels are relatively common**, many women are **unable to continue their studies beyond school level**. The survey findings show that **the main reasons for discontinuing education are marriage (36.5%) and financial difficulties (34.1%)**, followed by household responsibilities. These factors highlight how both economic and social conditions influence women's educational opportunities.

The employment analysis reveals that a large proportion of respondents are **currently homemakers (71.8%),** while only a very small percentage are formally employed. This indicates a significant gap between women's educational background and their participation in the workforce. Despite this, the study also found that many respondents expressed a willingness to engage in employment if suitable opportunities were available. In particular, **more than half of the respondents (54.1%) showed interest in participating in job training programs**, which suggests that skill development initiatives could play a major role in improving women's employment prospects.

Another key finding of the survey is the **low level of awareness about government schemes** related to education and employment. Approximately **72.9% of respondents** reported that they were not aware of such schemes, which indicates that many women may be missing opportunities for financial support, training programs, and employment assistance simply due to a lack of information. However, the survey also shows that **61.2% of respondents are willing to participate in government programs,** demonstrating that if awareness and accessibility are improved, participation rates could increase significantly.

The study also highlights several **major barriers preventing women from entering the workforce.** These include **household responsibilities, lack of skills or education, limited job opportunities, and insufficient family support**. Among these, household responsibilities were identified as one of the most significant challenges, indicating that many women are **unable to pursue employment due to domestic obligations.**

The survey also revealed that a noticeable proportion of respondents are interested in **entrepreneurship and starting small businesses.** However, many **women lack marketing knowledge and digital literacy skills** required to sustain such activities**.**

Based on these findings, the study recommends several measures to promote women's empowerment in Ponnani. **Increasing awareness about government schemes, establishing local skill development and vocational training programs, and promoting flexible or home-based employment opportunities** could help address many of the challenges identified in the survey. The study also suggests **promoting community-based production and marketing initiatives where women can contribute through home-based work while organized groups or institutions assist with collection, branding, and marketing of local products.** In addition, **educational institutions** can contribute by **offering career guidance, entrepreneurship training, and skill-based programs** that prepare women for employment and economic participation.

In conclusion, the study reveals that although women in Ponnani face several socio-economic barriers, there is a clear interest among many respondents to improve their skills and participate in employment opportunities. With better awareness, training opportunities, and institutional support, significant progress can be made in enhancing women's empowerment and economic participation in the region.

2. INTRODUCTION

2.1. Background

Women's participation in education and economic activities is an important factor in the social and economic development of any community. Despite improvements in educational access, many women continue to face barriers such as early marriage, limited employment opportunities, lack of awareness of government schemes, and social constraints.

To better understand these issues at the local level, the Department of Data Science of MES Ponnani College conducted a community survey among women in Ponnani. The study aimed to collect data regarding women's educational background, employment status, skill interests, and social challenges. The findings of this survey are expected to help the municipality identify areas where targeted interventions can support women's empowerment and economic participation.

2.2. Objectives of the Study

The main objectives of the survey were:

- To understand the educational status of women in Ponnani
- To identify factors affecting continuation of higher education
- To analyze the employment status of women
- To identify barriers preventing women from joining the workforce
- To assess awareness about government welfare schemes
- To support the economic empowerment of women in Ponnani
- To identify areas for skill development and entrepreneurship

2.3. Scope of the Project

This project focuses on analyzing the educational, social, and employment conditions of women in Ponnani municipality using survey data collected by the Department of Data Science, MES Ponnani College. The study examines factors such as education level, marital status, employment status, vocational training, and awareness of government schemes.

The project also identifies barriers that affect women's continuation of education and participation in the workforce, such as early marriage, lack of opportunities, and limited awareness of support programs. Additionally, it explores women's interests in skill development and training.

The analysis is based on responses from **women respondents** in Ponnani and aims to provide insights that can help the municipality and local institutions plan initiatives to improve women's education, employment opportunities, and empowerment.

3. METHODOLOGY

This section explains how the data for the study was collected, processed, and analyzed.

3.1 Data Collection

The data for this study was collected through a **primary survey** conducted among women in **Ponnani Municipality**. A structured questionnaire was prepared to gather information related to **demographic characteristics, educational background, employment status, vocational training, awareness of government schemes, and interest in skill development programs**.

The survey was conducted through direct interaction and responses were recorded using **Microsoft Excel** for easy organization and storage of the data.

3.2 Data Cleaning

After collecting the responses, the dataset was reviewed to ensure accuracy and consistency. The following steps were carried out during the data cleaning process:

- Checking for **missing or incomplete values**
- Correcting **inconsistent entries and spelling variations**
- Ensuring proper **column headings and data types**
- Sorting and filtering the dataset to identify any irregularities

These steps helped improve the quality and reliability of the dataset before performing analysis.

3.3 Data Analysis

The cleaned dataset was analyzed using **Python programming in Jupyter Notebook**. Libraries such as **Pandas and NumPy** were used for data manipulation and descriptive statistical analysis. Visualizations were created using **Matplotlib and Seaborn** to better understand patterns and relationships within the data.

Various charts such as **bar charts, pie charts, and histograms** were generated to present the distribution of variables such as education level, employment interest, family support, training participation, and awareness of government schemes.

3.4 Interpretation of Results

The visualizations and statistical summaries were interpreted to identify key patterns and insights related to women's education, employment opportunities, skill development needs, and barriers to workforce participation in Ponnani Municipality. These insights were then used to develop recommendations for improving awareness, training opportunities, and employment support for women in the area.

4. DATA ANALYSIS

The data collected from **women respondents in Ponnani** was analyzed to understand their educational background, employment status, and challenges affecting their participation in education and employment opportunities. The analysis also examined awareness of government schemes, interest in skill development programs, and the role of family support in women's decision-making.

1. Age Distribution

The respondents belong to different age groups, representing women at various stages of life. A significant portion of respondents fall within the **young and middle-age categories**, indicating a potential workforce that could benefit from employment and training opportunities.

2. Educational Background

The analysis shows that many respondents have completed **secondary or higher secondary education**, while only a smaller proportion have pursued higher education. This indicates that although basic education levels are common, continuation into higher education remains limited.

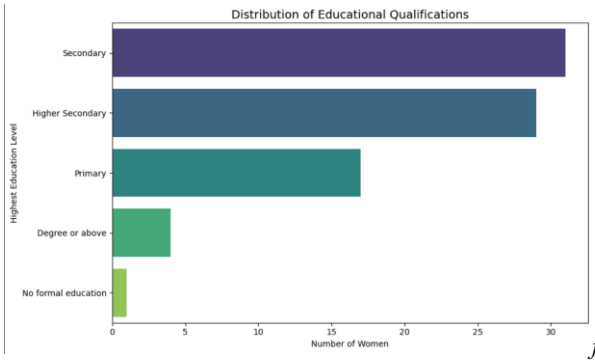

figure 4.1 distribution of educational qualification

3. Reasons for Discontinuing Education

Among respondents who discontinued their studies, **marriage and financial difficulties** were identified as the most common reasons. These factors highlight both social and economic barriers affecting women's educational progress.

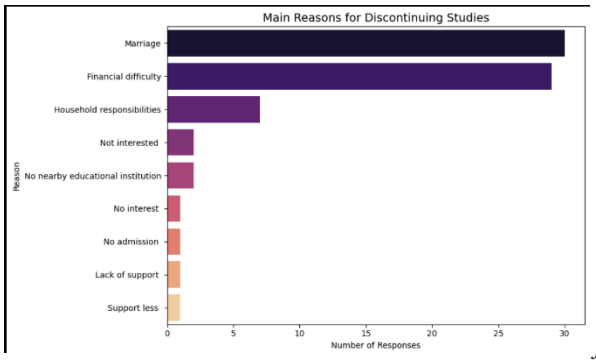

figure 4.2.Reasons for Discontinuing Education

4. Current Employment Status

The survey reveals that the majority of respondents are currently **homemakers**, while only a small percentage are engaged in paid employment. This suggests that many women remain outside the workforce despite having educational qualifications.

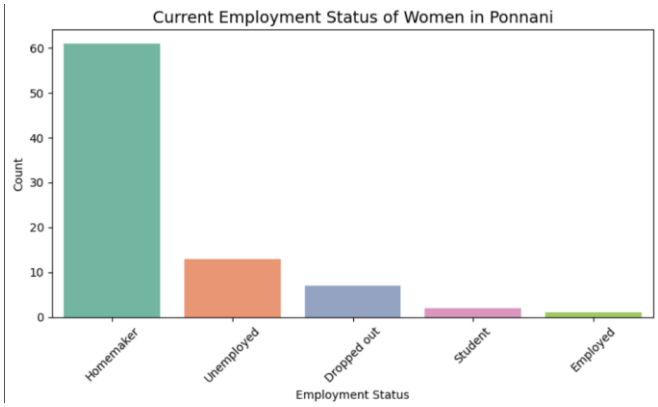

figure 4.3.Current Employment Status

5. Interest in Employment and Training

Many respondents indicated a **willingness to work and participate in job training programs** if suitable opportunities are available. This highlights the importance of skill development initiatives and employment support programs for women.

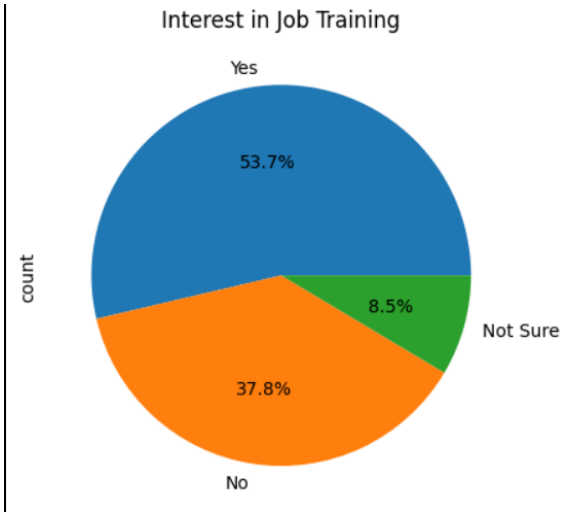

figure 4.4 Interest in Employment and Training

6. Awareness of Government Schemes

The analysis shows that awareness about government schemes related to education, employment, and skill development is **relatively limited among respondents**. Increasing awareness could help more women access available support programs.

7. Entrepreneurial Interest Among Women

The analysis indicates that a noticeable proportion of women in Ponnani have expressed interest in starting their own businesses or becoming entrepreneurs. This reflects a growing aspiration among women to achieve financial independence and contribute to household income through self-employment. Encouraging entrepreneurship through skill development programs, financial support, and awareness about government schemes for small businesses could help these women transform their interests into sustainable livelihood opportunities.

5. KEY FINDINGS

The analysis of the survey conducted among **women respondents in Ponnani** reveals several important findings related to education, employment, marriage, family support, and awareness of empowerment opportunities.

1. Education Level of Respondents

The survey indicates that most respondents have completed **secondary or higher secondary education**, while only a small percentage have pursued higher education such as degree programs. This suggests that although basic education is relatively common, many women are unable to continue their studies beyond school level.

2. Reasons for Discontinuing Education

One of the major findings of the study is that a significant number of women discontinued their education due to **marriage and financial difficulties**. Marriage accounted for approximately **36.5%** of the cases, while financial problems contributed to **34.1%**. Other reasons include lack of interest, limited educational support, and family responsibilities.

3. Employment Status

The analysis shows that the majority of respondents are currently **homemakers**, accounting for **71.8%.** Only a small proportion of respondents are engaged in paid employment. This highlights a significant gap between women's educational attainment and their participation in the workforce.

4. Willingness to Work

Despite the high percentage of homemakers, the survey reveals that many women are willing to work if suitable opportunities are available. A large proportion of respondents expressed interest in employment, particularly in jobs that offer flexible working conditions.

5. Interest in Skill Development

The findings show that **54.1%** are interested in participating in **job training or skill development programs**. This indicates that many women are willing to acquire new skills that could help them enter the workforce.

6. Awareness of Government Schemes

The survey results reveal a **low level of awareness regarding government schemes** related to education, employment, and women empowerment. Approximately **72.9%** reported that they were not aware of such programs. Lack of awareness prevents many women from accessing available opportunities and support systems.

7. Family Support and Decision-Making

Family support plays a crucial role in women's empowerment. While many respondents reported having some level of family support, others indicated that **family responsibilities and lack of permission** can limit their ability to pursue education or employment.

8. Major Obstacles Faced by Women

The key obstacles identified in the survey include:

- Household responsibilities
- Lack of education or skills
- Financial constraints
- Limited job opportunities
- Lack of family support

These barriers significantly affect women's ability to participate in economic activities.

9. Entrepreneurial Interest Among Women

The analysis shows that a noticeable percentage of women in Ponnani are interested in starting their own businesses or becoming entrepreneurs. This reflects a growing interest in self-employment and financial independence among women.

6. OBSERVATIONS

Based on the responses collected from **women respondents** and the discussions conducted during the survey process, several important observations were identified regarding women's social and economic conditions in Ponnani.

One major observation is the **gap between education and employment**. Although many respondents have completed secondary or higher secondary education, a large percentage remain homemakers. This indicates that educational attainment does not always translate into employment opportunities for women.

Another key observation is that **marriage and financial difficulties are major reasons for discontinuing education**. These factors significantly affect women's ability to pursue higher education and develop professional careers.

The survey also revealed a **low level of awareness about government schemes and empowerment programs**. Many respondents reported that they were not familiar with the various training programs, financial assistance schemes, and employment initiatives available for women.

During the survey discussions, some respondents expressed interest in **group-based income-generating activities**, such as poultry farming and food processing. Women in certain neighbourhoods mentioned that they would prefer to work together as a group because it would allow them to share responsibilities and generate income while still managing household duties.

However, respondents pointed out a practical problem affecting such initiatives. Many areas have a **high population of stray dogs**, which makes it difficult to safely raise poultry. Because of this issue, women are hesitant to start poultry farming even though they are interested in such activities.

Another important observation raised by respondents from **coastal areas** was related to **unequal access to municipal programs**. Some women reported that although the municipality organizes programs such as distribution of livestock, skill training, and other support initiatives, these benefits often do not reach people living in coastal regions near the beach. As a result, women in these areas feel that they have fewer opportunities to participate in such programs compared to other parts of the municipality.

These observations highlight that while there are opportunities available for women's empowerment, **practical barriers such as lack of awareness, infrastructure challenges, and unequal access to programs** continue to limit participation for many women.

The analysis of open-ended responses indicates that women's empowerment requires not only employment opportunities but also **financial assistance, counselling support, and encouragement from families and communities.** These factors together influence women's ability to participate in education, skill development, and income-generating activities.

7. POLICY IMPLICATIONS

The findings of this study provide important insights for local governance and development planning related to women's empowerment in Ponnani. The results indicate that several structural and social factors continue to influence women's access to education, employment, and economic participation.

- One of the major implications of the study is the strong link between **financial constraints and women's opportunities**. Financial difficulties were consistently identified across multiple responses as a factor affecting education, skill development, and employment participation. This suggests that policies focusing on **financial assistance, microcredit facilities, and support for small-scale enterprises** can significantly improve women's economic independence.
- Another important implication relates to the **gap between education and employment opportunities for women**. Although many respondents have completed basic levels of education, a large proportion remain homemakers. This indicates the need for policies that promote **skill-oriented training and livelihood programs** that allow women to convert educational qualifications into practical employment opportunities.
- The study also highlights the **importance of awareness and information accessibility**. A significant number of respondents reported limited knowledge about government schemes related to education, employment, and entrepreneurship. This suggests that improving **information dissemination and community outreach** is essential for ensuring that women can benefit from existing programs.
- In addition, the survey revealed **geographical disparities in access to development initiatives**, particularly among women living in coastal areas. Some respondents indicated that municipal programs and support initiatives do not always reach these communities effectively. This implies that local governance strategies should focus on **inclusive implementation mechanisms** that ensure equal access to programs across different regions of the municipality.
- Another important implication of the study is the interest expressed by respondents in **collective or group-based livelihood activities**, such as small-scale farming and livestock rearing. Supporting such initiatives through **women's self-help groups, cooperative models, and community-based enterprises** could provide sustainable income opportunities while allowing women to balance household responsibilities.
- The findings also highlight the role of **confidence-building measures, counseling, and family support** in empowering women. Social and motivational support systems are important factors that influence women's willingness to participate in education, training, and employment activities.
- The survey findings indicate that a noticeable proportion of women in Ponnani are interested in **starting their own businesses or becoming entrepreneurs.** This suggests that local authorities and development programs should promote women's entrepreneurship by providing skill training, financial assistance, and support for small-scale enterprises to help women achieve economic independence.

Overall, the study suggests that women's empowerment initiatives should adopt a **multi-dimensional approach** that combines financial support, skill development opportunities, awareness programs, and inclusive policy implementation. Such an approach can help create an environment where women are able to participate more actively in economic and social development within the municipality.

8. RECOMMENDATIONS TO MUNICIPALITY

Based on the findings of the community survey conducted among women aged 18–35 in different wards of ponnani , several measures can be undertaken by the municipality to strengthen women's economic and social empowerment. The following recommendations are proposed to improve access to education, employment opportunities, and awareness of welfare schemes.

1. Organize Skill Development and Vocational Training

The municipality can conduct regular skill development programs aimed at improving employability among women. Training areas may include tailoring, food processing, digital skills, beauty and wellness services, and handicraft production. Such programs can help women acquire income-generating skills and promote self-employment.

2. Strengthen Women's Self-Help Groups and Entrepreneurship

Women's collectives can be encouraged to start small enterprises through support mechanisms such as training, financial guidance, and market linkages. Collaboration with local women's development initiatives such as Kudumbashree can further enhance community-based economic activities.

3. Conduct Awareness Programs on Government Welfare Schemes

The survey indicates that awareness about government schemes is limited among many women. The municipality can organize awareness campaigns and help desks to guide women on available schemes related to education, employment, entrepreneurship, and financial assistance.

4. Promote Higher Education and Career Guidance

Career guidance sessions and educational counseling programs can be organized in collaboration with local educational institutions to encourage women to pursue higher education and professional training. Scholarships and continuing education opportunities should be promoted through community outreach programs.

5. Encourage Women Entrepreneurship and Micro-Enterprises

The municipality can facilitate entrepreneurship by supporting small businesses started by women. This may include assistance with registration, licensing, training in business management, and providing opportunities to sell products through local markets, exhibitions, and community fairs.

6. Improve Digital and Financial Literacy

Digital literacy programs can help women access online services, digital banking, and online marketplaces. Training in financial management, savings, and small business accounting can further enhance economic independence.

7. Strengthen Community Support Systems

Improving access to childcare facilities, community centers, and safe public spaces can help women participate more actively in educational and economic activities. Strengthening such infrastructure will reduce barriers that often prevent women from joining the workforce.

8. Establish Continuous Monitoring and Community Engagement

It is recommended that the municipality periodically monitor the progress of women empowerment initiatives and conduct follow-up surveys to assess impact. Partnerships with local colleges and community organizations can support evidence-based planning and evaluation.

9. Promote Institutional Collaboration

Collaboration between municipal authorities and educational institutions can facilitate research-based community development initiatives. Such partnerships can support data collection, program evaluation, and awareness activities aimed at improving women's participation in education and employment.

10. Establish Ward-Level Women Production and Marketing Groups

Since Ponnani is a coastal area with access to local resources such as fish and traditional food products, the municipality can facilitate the formation of ward-level women's groups or cooperatives. Women can engage in home-based production and provide locally made products, while the municipality or organized societies can support the collection, branding, and marketing of these products. Providing digital literacy and basic marketing support can further help promote these products through local markets and online platforms, enabling women to earn income while continuing home-based work.

9. RECOMMENDATIONS TO COLLEGES

MES Ponnani College plays an important role in promoting education and community engagement. As the College is located in the same ward where this survey was conducted, which gives the institution a strong opportunity to support the local community. The college can contribute by organizing awareness programs, skill development workshops, and community-based projects that promote education, digital literacy, and entrepreneurship among women in the area.

1. Career Guidance and Counselling Programs

Colleges should organize regular **career guidance sessions** that help students understand different career pathways, higher education opportunities, and employment prospects. These programs can motivate students to pursue higher education and long-term career goals.

2. Skill Development Workshops

Institutions can introduce short-term skill development programs such as computer literacy, digital literacy, communication skills, and practical training like **tailoring and fashion design**. The college can utilize its academic resources to provide such programs and support women interested in developing employable skills.

3. Entrepreneurship Development Programs

Colleges can encourage students to develop entrepreneurial skills by organizing startup workshops, innovation competitions, and mentorship programs. Collaboration with organizations such as **Kerala Startup Mission and Kudumbashree** can support students interested in starting small businesses. The college can also utilize its **academic resources, particularly business-related programs such as BBA and B.Com**, to provide guidance on **marketing skills, business planning, and financial management**, as many individuals in Ponnani lack marketing knowledge and digital literacy needed to sustain small businesses.

4. Community-Based Learning Initiatives

Colleges can encourage students to participate in **community outreach programs** that address local challenges faced by women. Through initiatives such as awareness campaigns, training workshops, and social service activities, students can help spread information about government schemes and empowerment programs.

5. Internship and Industry Collaboration

Partnerships with **local businesses, training institutes, and industries** can provide internship opportunities for students. Such collaborations help students gain practical experience and better prepare them for the workforce.

10. CONCLUSION

This study provides important insights into the challenges and opportunities related to women's empowerment in Ponnani. The survey conducted among respondents highlights several social, economic, and structural factors that influence women's education, employment, and participation in decision-making.

The findings indicate that although many women **have completed basic levels of education, a large proportion remain outside the workforce**. Factors such as **marriage, financial constraints, and household responsibilities** continue to limit women's opportunities to pursue higher education and employment**. Financial difficulties** emerged as one of the most consistent challenges across the study, affecting women's ability to continue their education, participate in skill development programs, and explore income-generating opportunities.

The study also reveals a **low level of awareness** about government schemes and empowerment programs, which prevents many women from benefiting from available resources and support systems. In addition**, respondents from coastal areas reported that certain municipal initiatives do not always reach their communities effectively,** highlighting the need for more inclusive program implementation.

Another important finding is that many women expressed interest **in skill development programs and group-based livelihood activities, such as small-scale farming or cooperative initiatives.** However, practical challenges such as environmental issues and limited infrastructure can affect the success of these activities.

The responses also emphasize the importance of counselling, guidance, and family support in improving women's confidence and encouraging participation in education and employment opportunities. Empowerment initiatives should therefore address both economic and social factors that influence women's decisions.

The study also highlights **a growing interest among women in entrepreneurship and self-employment opportunities.** However, many women **lack marketing knowledge and digital literacy** skills necessary to successfully promote and sustain small businesses.

In conclusion, improving women's empowerment in Ponnani requires coordinated efforts from local government authorities, educational institutions, and community organizations. By increasing awareness of government programs, promoting skill development, supporting entrepreneurship, and ensuring equal access to opportunities across different communities, it is possible to create an environment where women can achieve greater social and economic independence.

Encouraging community-based production and marketing initiatives, particularly in coastal areas where local resources such as fish and traditional food products are available, can create sustainable income opportunities. Organized ward-level groups or cooperatives can support the collection, branding, and marketing of these products, enabling women to participate in income-generating activities while continuing home-based work.

Empowering women ultimately contributes not only to their personal development but also to the overall progress and sustainable development of the community.

Appendix A: Survey Questionnaire

The following questionnaire in Malayalam was used to collect responses from women respondents in Ponnani for the purpose of this study

M.E.S PONNANI COLLEGE

DEPARTMENT OF DATA SCIENCE

വിഭാഗം A: അടിസ്ഥാന വിവരങ്ങൾ

1. നിങ്ങളുടെ വയസ്:

☐ 18–22 ☐ 23–27 ☐ 28–32 ☐ 33–35

2. വിവാഹസ്ഥിതി:

☐ അവിവാഹിത

☐ വിവാഹിത

☐ വേർപിരിഞ്ഞത് / വിധവ

3. (വിവാഹിതയാണെങ്കിൽ) വിവാഹ സമയത്തെ വയസ്:

☐ 18-ൽ താഴെ

☐ 18–21

☐ 22–25

☐ 25-ന് മുകളിൽ

☐ ബാധകമല്ല

4. കുടുംബരീതി:

☐ ന്യൂക്ലിയർ കുടുംബം (അച്ഛൻ–അമ്മ–മക്കൾ)

☐ സംയുക്ത കുടുംബം

വിഭാഗം B: വിദ്യാഭ്യാസം

5. നിങ്ങൾക്ക് പ്രാഥമിക വിദ്യാഭ്യാസമുണ്ടോ?

☐ ഉണ്ട് ☐ ഇല്ല

6. നിങ്ങൾ പൂർത്തിയാക്കിയ ഏറ്റവും ഉയർന്ന വിദ്യാഭ്യാസം:

☐ ഔപചാരിക വിദ്യാഭ്യാസമില്ല

☐ പ്രൈമറി

☐ സെക്കൻഡറി

☐ ഹയർ സെക്കൻഡറി

☐ ഡിഗ്രി അല്ലെങ്കിൽ അതിനുമുകളിൽ

7. ഇപ്പോഴത്തെ സ്ഥിതി:

□ വിദ്യാർത്ഥിനി

□ ജോലി ചെയ്യുന്നവർ

□ ജോലി ഇല്ലാത്തവർ

□ വീട്ടമ്മ

□ പഠനം നിർത്തിയവർ

8. പഠനം നിർത്തിയതിന്റെ പ്രധാന കാരണം:

□ വിവാഹം

□ സാമ്പത്തിക ബുദ്ധിമുട്ട്

□ വീട്ടുപണികൾ / ഉത്തരവാദിത്വങ്ങൾ

□ സമീപത്ത് വിദ്യാഭ്യാസ സ്ഥാപനമില്ല

□ മറ്റ് കാരണം: ___

9.നിങ്ങൾക്ക് ഇഷ്ടമുള്ള പഠന മേഖല ഏതാണ്?

□ കല

□ സയൻസ്

□ കൊമേഴ്സ്

□ തൊഴിൽ പരിശീലനം

□ മറ്റ്_____

10.നിങ്ങൾക്ക് ജോലി ചെയ്യാനുള്ള ആഗ്രഹമുണ്ടോ?

□ ഉണ്ട്

□ ഇല്ല

□ വീട്ടിൽ നിന്ന് ചെയ്യുന്ന ജോലി ആഗ്രഹിക്കുന്നു

വിഭാഗം C: തൊഴിലും കഴിവുകളും

11. (ജോലി ചെയ്യുന്നവരാണെങ്കിൽ) ജോലി തരം:

_____

12. നിങ്ങൾ ഏതെങ്കിലും തൊഴിൽപരിശീലനം / സ്കിൽ ട്രെയിനിംഗ് നേടിയിട്ടുണ്ടോ?

□ ഉണ്ട് □ ഇല്ല

23. നിങ്ങളുടെ പ്രദേശത്ത് സ്ത്രീകൾക്ക് വിദ്യാഭ്യാസം അല്ലെങ്കിൽ ജോലി തുടരാൻ ഏറ്റവും വലിയ ബുദ്ധിമുട്ട് എന്താണ്?

24. സ്ത്രീകളുടെ വിദ്യാഭ്യാസവും തൊഴിലും മെച്ചപ്പെടുത്താൻ എന്ത് സഹായമാണ് വേണ്ടത് എന്ന് നിങ്ങൾക്ക് തോന്നുന്നു?

25.നിങ്ങളുടെ അഭിപ്രായത്തിൽ, യുവതികൾക്ക് ആത്മവിശ്വാസം വർധിപ്പിക്കാൻ സഹായകമായ കാര്യങ്ങൾ എന്തൊക്കെയാണ്?
